A METHOD, SYSTEM, AND STORAGE MEDIUM FOR PROVIDING AUTOMATED EXECUTION OF PRE-DEFINED EVENTS

ABSTRACT OF THE DISCLOSURE

Embodiments relate to a method, system, and storage medium for providing automated execution of pre-defined events over a network. The method includes receiving a profile for a requestor of an event to be executed. The profile includes a personal identifier for associating the requestor with the profile, a communications address for the requestor, at least one event recipient identifier used to identify an individual or entity that is the object of the event, and at least one event recipient communications address. The method also includes receiving events defined for execution at a future time, receiving a request to execute at least one of the events, and executing the event on behalf of the requestor.
